

# Recent advancements on the community Unified Forecast System

Neil Jacobs

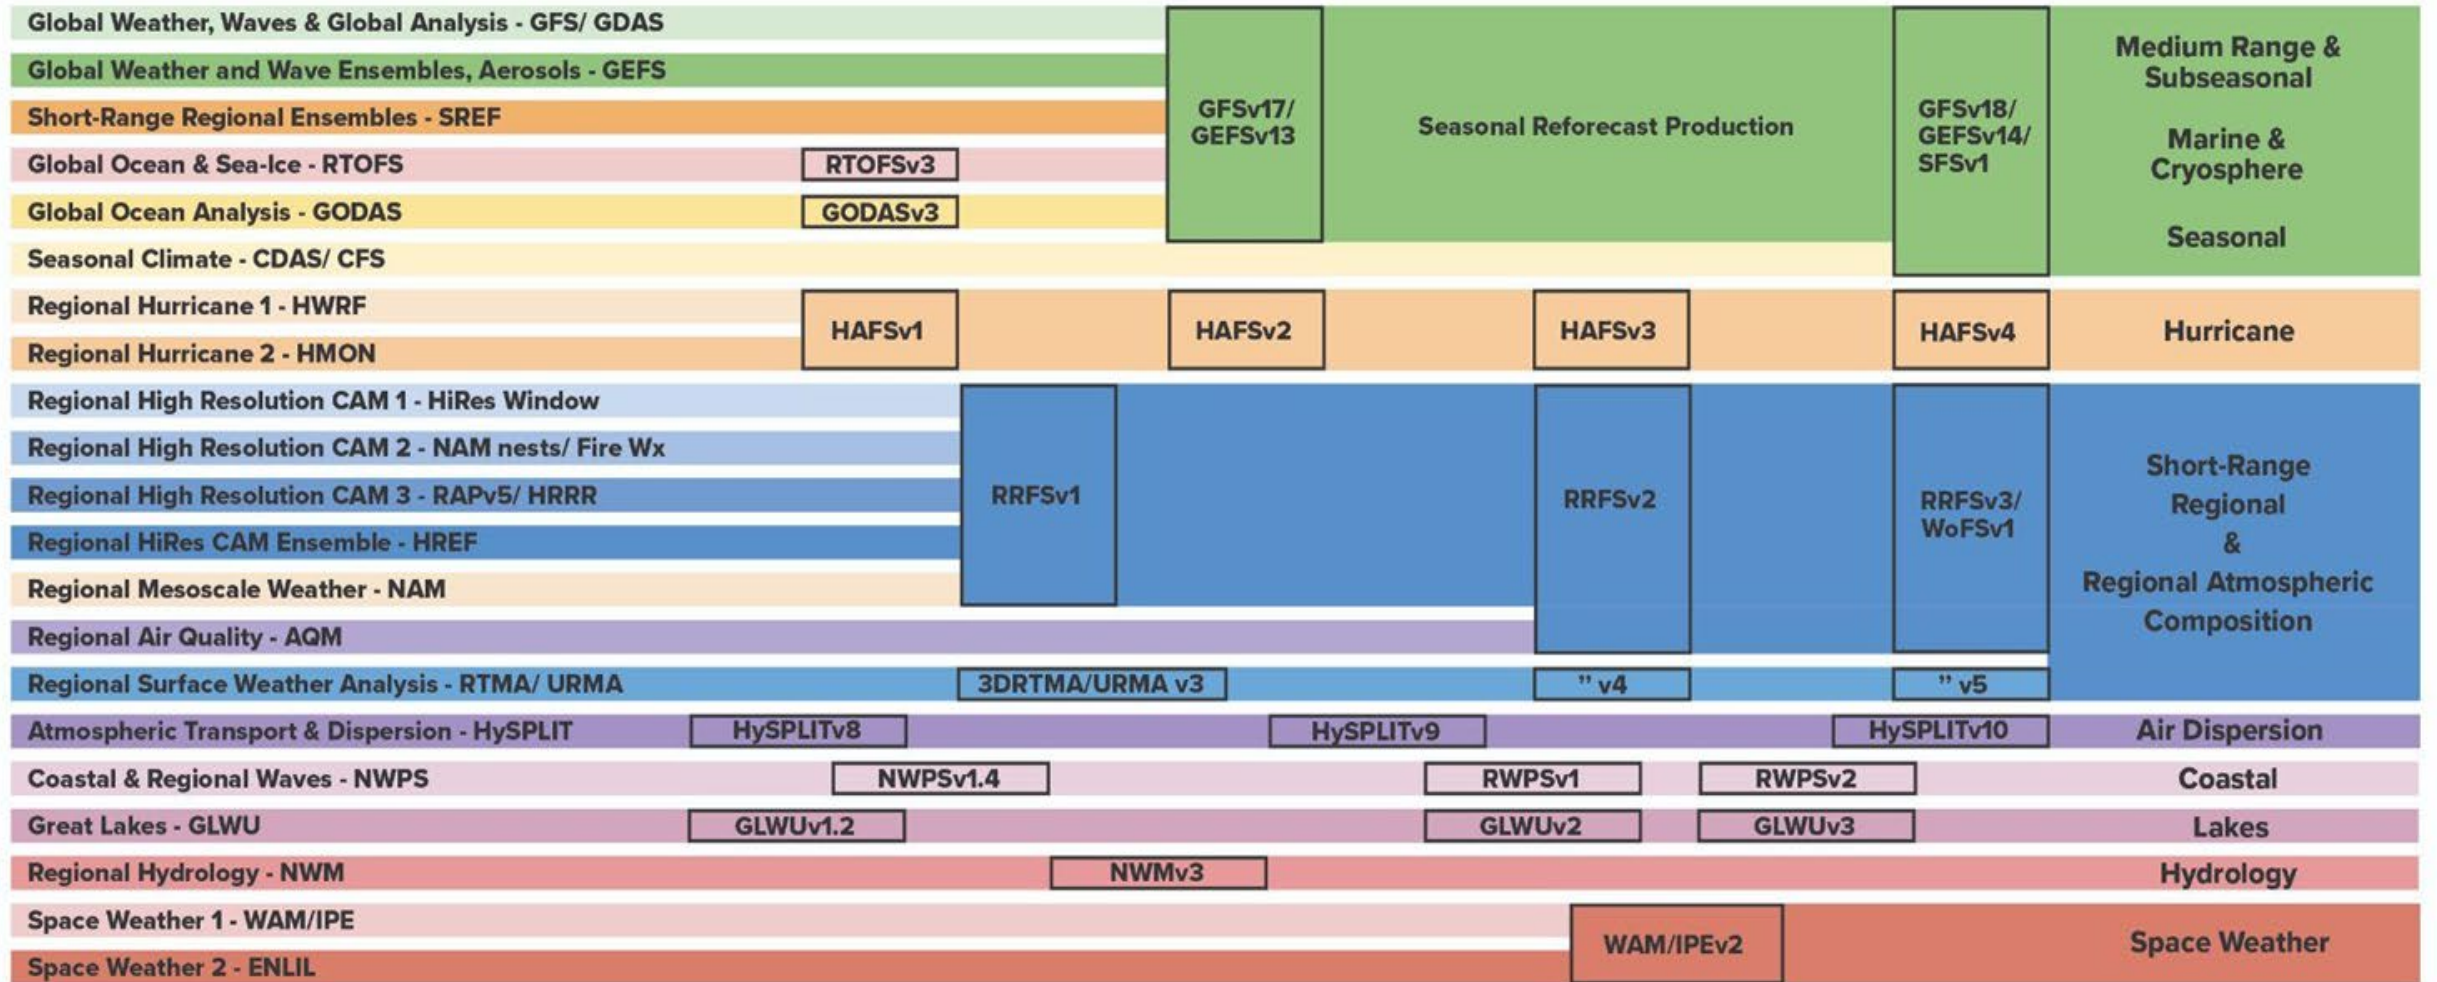

NMME Workshop 2023

# What is the difference between EPIC and the UFS?

- **Unified Forecast System is open-source software with multiple applications that use a common code base (cars)**
- **Earth Prediction Innovation Center (EPIC) is a program that supports the export of production code and the import of community innovations (highway with on/off ramps)**

# UFS phased transition

21 Independent Stand-alone Systems  8 UFS Applications

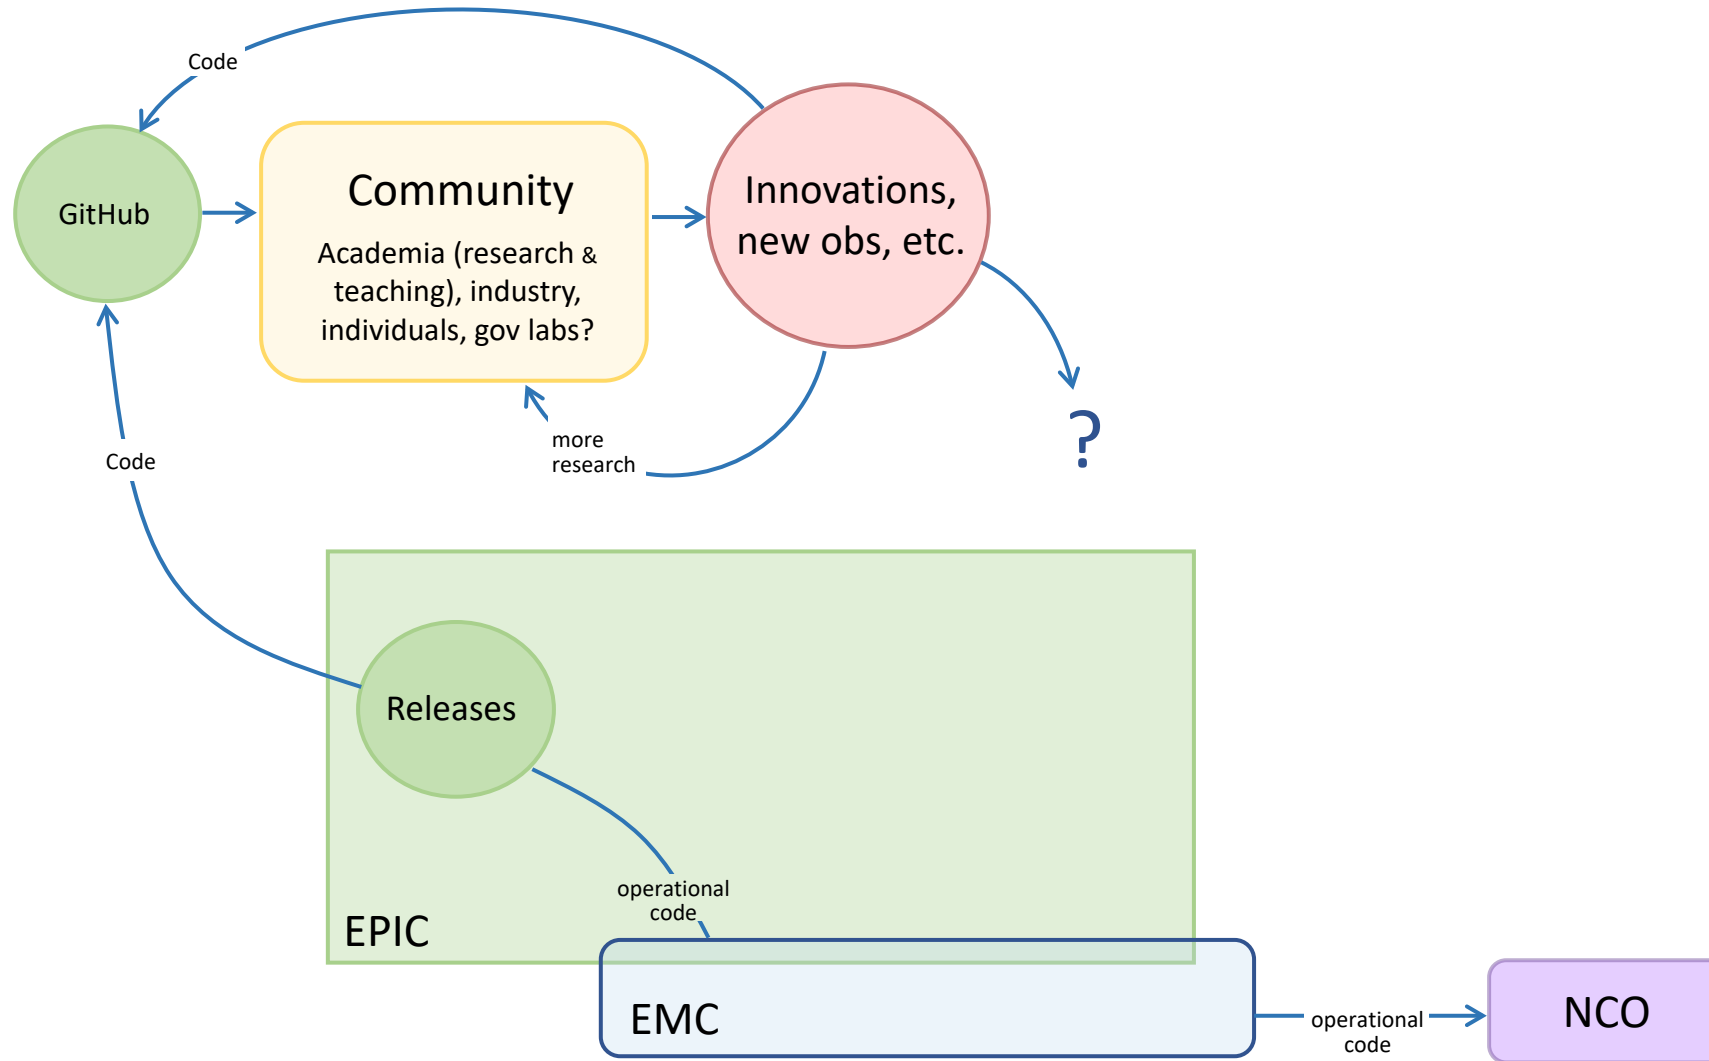

# UFS Matrix, Roles, and Touchpoints

UFS Application Teams (ATs) are responsible for developing and delivering each UFS product

	Medium-Range Weather	Short-Range Weather	Seasonal	Hurricane	Space Weather	Marine and Cryosphere	Coastal	Air Quality	?
<b>UFS CMB</b>	Representatives of organizations contributing resources to UFS from public, private, and academic sectors								
<b>UFS-SC</b>	Overall leads for each application are responsible for identifying forecast skill priorities, determining science strategies, developing release schedules, and representation from cross-cutting teams and working groups								
<b>Cross-Cutting Teams</b>	Leads and points of contact for cross-cutting teams focused on communication and outreach, release preparation, system architecture and infrastructure, and V&V								
<b>Working Groups</b>	Leads and points of contact for working groups focused on aerosols and atmospheric composition, data assimilation, ensembles, dynamics, land, marine, physics and post-processing.

Getting Started - Earth Predict x +

epic.noaa.gov/getting-started/

Earth Prediction Innovation Center

## Getting Started

### Welcome to Getting Started!

**aws** The only pre-requisite to start this workflow is getting an AWS account which can be [done here](#).  
Log in as **root user** if you have never used AWS before.

Once you are logged in you can start the video and tutorial below. The video walkthrough goes over running the [Short Range Weather Application](#) on the cloud as an example. As the EPIC team makes more UFS applications available on the cloud, we will make video tutorials that cover each; signing onto the cloud and getting things running will remain the same.

## Running the Short-Range Weather Application on the AWS Cloud

Working on forecast hour 006  
38.5  
262.5  
22.347 seconds to read all messages  
Working on slp for conus  
0.877 seconds to plot slp for: conus  
Working on t2m for conus  
0.791 seconds to plot 2mt for: conus  
Working on 10mwsdp for conus  
skipping every 8 grid points to plot  
0.985 seconds to plot 10mwsdp for: conus  
Working on surface-based CAPE/CIN for conus  
1.928 seconds to plot surface-based CAPE/CIN for: conus  
Working on 500 mb Hgt/Wind/Vort for conus  
0.960 seconds to plot 500 mb Hgt/Wind/Vort for: conus  
Working on 250 mb WIND for conus  
1.372 seconds to plot 250 mb WIND for: conus  
Working on total qpf for conus  
1.313 seconds to plot total qpf for: conus  
Working on composite reflectivity for conus

Watch on YouTube

If you run into any issues we encourage you to ask questions on our newly created [Github Discussions board](#) where someone from the EPIC team or someone from the community can answer it.

[Initial Steps to Configure AWS Instance](#)

Please be aware that you will need to cover the costs of running the SRW on the cloud. Below is a break-down of what kinds of charges you may incur:

## EPIC AWS Costs

Table View

Chart View

Show 10 rows

UFS Process	AWS Services	Cost
Continuing Monthly Costs	x5.xlarge EC2 Image Builder, S3	\$10 - \$12
Image builder	x5.xlarge EC2 Image Builder, S3	\$4 - \$6
SRW Run	x5.xlarge EC2 Image Builder, S3	\$8 - \$10
Total Monthly Single Run	x5.xlarge EC2 Image Builder, S3	\$22 - 28

# JEDI Academies

The JEDI Academy is a week-long training for new users of the JEDI Data Assimilation system. JCSDA organized 7 JEDI Academies since 2018 (in-person and online).

- Lectures on JEDI components by JCSDA staff
- Interactive tutorials on using and contributing to JEDI
- Tutorials run on AWS using containers and Jupyter notebooks

# UFS Community Innovation and Educational Support

## WPO offers “Innovations for Community Modeling Competition” with FY2023 Grants

NOAA's *Weather Program Office (WPO)* is soliciting proposals for four (4) grant competitions, valued at approximately \$13.5 million per year. For the first time, WPO is offering the *Innovations for Community Modeling Competition*, integrating four of its Programs: *Joint Technology Transfer Initiative (JTTI)*, *Earth Prediction Innovation Center (EPIC)*, *Subseasonal to seasonal (S2S)* and *Atmospheric Composition (AC)*.

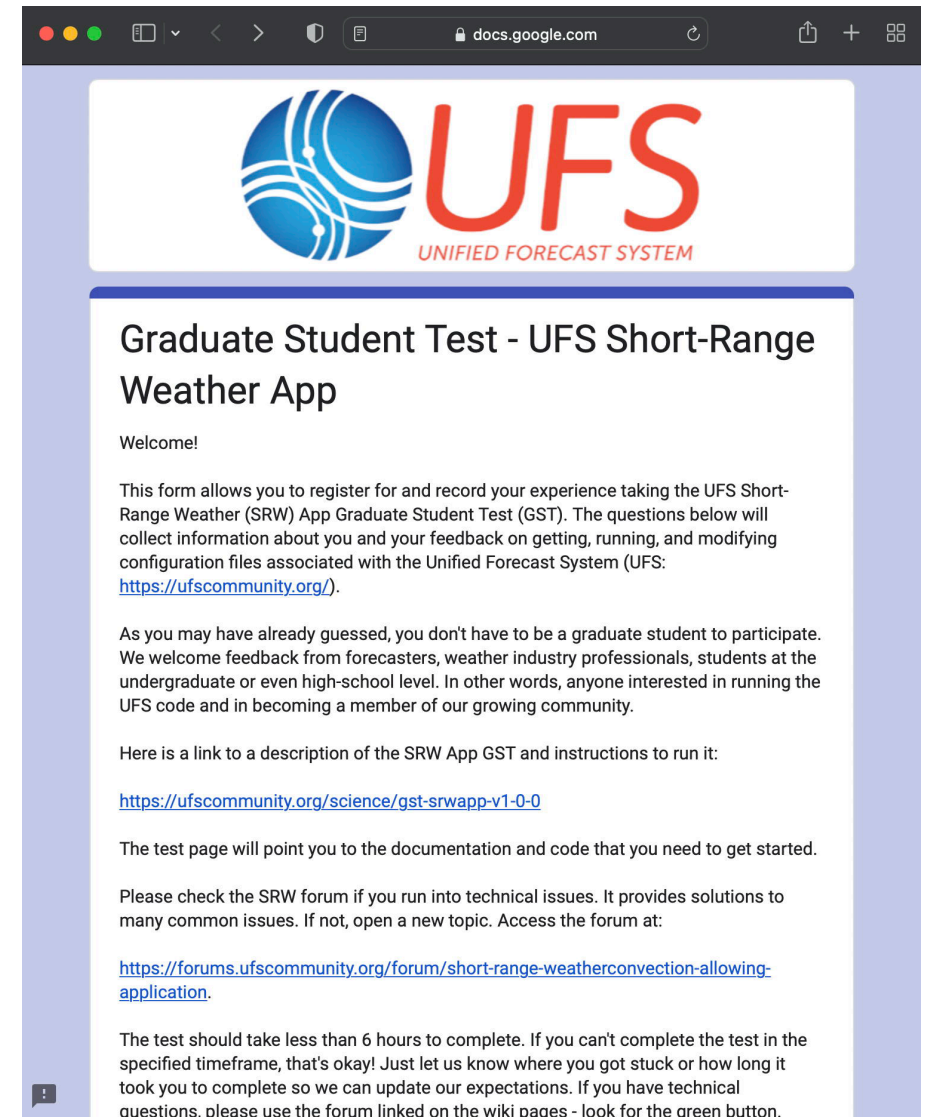

### *Innovation for Community Modeling Competition*

The competition will award approximately \$5.0 M in total award funding per year. It is expected to fund 10-15 projects with a maximum funding limit of \$500K per year.

To qualify as *innovative*, proposals submitted to the *Innovations for Community Modeling Competition* must focus on substantially new approaches.

Model developments should focus on the *Unified Forecast System (UFS)* of the future.

WPO is seeking projects that are high-risk proof-of-concept ideas, as well as larger collaborative proposals, that will help NOAA's vision and mission, towards advancing the UFS, to become the most accurate and reliable operational modeling system in the world.

The screenshot shows a Google Docs document with the UFS logo at the top. The main heading is "Graduate Student Test - UFS Short-Range Weather App". The text includes a welcome message, a description of the test, and several links to the UFS website and forum. A red box highlights the text: "Model developments should focus on the Unified Forecast System (UFS) of the future."

docs.google.com

### Graduate Student Test - UFS Short-Range Weather App

Welcome!

This form allows you to register for and record your experience taking the UFS Short-Range Weather (SRW) App Graduate Student Test (GST). The questions below will collect information about you and your feedback on getting, running, and modifying configuration files associated with the Unified Forecast System (UFS): <https://ufscommunity.org/>.

As you may have already guessed, you don't have to be a graduate student to participate. We welcome feedback from forecasters, weather industry professionals, students at the undergraduate or even high-school level. In other words, anyone interested in running the UFS code and in becoming a member of our growing community.

Here is a link to a description of the SRW App GST and instructions to run it: <https://ufscommunity.org/science/gst-srwapp-v1-0-0>

The test page will point you to the documentation and code that you need to get started.

Please check the SRW forum if you run into technical issues. It provides solutions to many common issues. If not, open a new topic. Access the forum at: <https://forums.ufscommunity.org/forum/short-range-weatherconvection-allowing-application>.

The test should take less than 6 hours to complete. If you can't complete the test in the specified timeframe, that's okay! Just let us know where you got stuck or how long it took you to complete so we can update our expectations. If you have technical questions, please use the forum linked on the wiki pages - look for the green button.

# NSF signals support for exploring multiple configurations

NSF 23-095

## Dear Colleague Letter: Physical and Dynamic Meteorology Update on Modeling Tools and Support

April 27, 2023

Dear Colleague:

The purpose of this Dear Colleague Letter (DCL) is to convey to the scientific community that, for numerical modeling-based activities, NSF's [Physical and Dynamic Meteorology](#) (PDM) program welcomes proposals that make use of any modeling system that will advance the relevant science.

The dominant model in the mesoscale meteorology community has been the Weather Research and Forecasting (WRF) model, which remains a viable and valuable tool. As a signal of the ongoing commitment to WRF, NSF has recently funded an effort to develop a new containerized version of WRF that will further lower the barrier of entry for the use of the model and evaluation tools. However, newer modeling systems such as the Model for Prediction Across Scales (MPAS) and the Unified Forecast System (UFS) with the FV3 dynamical core are being developed that may significantly expand future capabilities. Thus, NSF encourages PIs to explore these new systems while also introducing them to and training students.

With this DCL, PDM is extending an invitation for supplemental support ideas to *active PDM awards* that will introduce MPAS and/or UFS into the project. The purpose of these supplements should be to: 1) increase the robustness of research findings by demonstrating them on a different modeling system, 2) provide opportunities for training on new modeling tools, and 3) provide assessment and feedback of the capabilities of the new systems. Supplemental funding requests will only be allowed with approval from PDM following the concept paper path described in the next paragraph. PDM also encourages Research Opportunity Award (ROA) supplemental support ideas for faculty from

# Community Modeling Board (CMB)

- **CMB Structure and Initialization - 15 members with representation from the various stakeholder categories; one liaison from the NOAA Modeling Team, and one liaison from the EPIC Program Team.**
- **Enhance communication, collaboration, coordination, and partnerships to increase public, private and academic participation**
- **Serve as a point of contact for leveraging community expertise to advance the UFS and advocate for community needs that will facilitate their contributions to the UFS**
- **Provide strategic advice to the UFS Steering Committee (UFS-SC) on the UFS (e.g., identify modeling priorities, best practices, innovative ideas, etc.)**
- **Help prioritize advancement of the UFS by defining goals and objectives, and identifying barriers**
- **Provide a means to continuously share feedback about research and modeling innovations through various channels (e.g., EISWG, ICAMS, AMS, AGU, etc.)**

# What's next for UFS?

## Short term

- ✓ Map the process
- ✓ Design community governance where needed
- Road Show/AGU/AMS, including UFS short courses
- Revise and update Charters/CMB/I2O Report
- Develop outreach and engagement plan
- Develop teaching material
- Surveys/Questions sent out

## Medium term

- ✓ Upcoming opportunities: hackathons, code sprints, fellowships, innovation NOFOs
- Solicit community input to help solve key challenges
- Develop a more coordinated approach for releases
- Develop additional toy models, idealized cases, etc.
  - Expand coupling and applications
  - Explore industry JV and NGO fund-matching opportunities

Thank You!!

njacobs@ucar.edu
